

Rapid, painless, and completely non-invasive

● What is FibroScan ?

Examination with FibroScan, also called transient elastography, is a non-invasive way to measure the stiffness of your liver. FibroScan works by emitting a small pulse of energy, which may feel as a slight vibration on your skin. Fibroscan calculates the speed of the energy to give your doctor an immediate measure of the stiffness of your liver. This stiffness measure can be an important part of understanding your overall liver health.

● Is it painful?

NO!. The FibroScan examination is painless, quick and easy. During measurement, you feel a slight vibration on the skin at the tip of the probe.

● What will the FibroScan examination be like?

You will lay on your back, with your right arm raised behind your head. Your examination provider will apply a water-based gel to the skin and then place the probe on the right side of your ribcage. The examination provider will make quick 10 measurements during the course of the FibroScan examination. These measurements will be used to establish an overall stiffness score.

The liver is an incredibly important organ that is necessary for digesting food and removing toxins from the body. While some liver diseases are genetic, liver disease can also develop as a result of **poor diet, heavy alcohol use, obesity and viral infections** (e.g. hepatitis). Liver disease is more common than you might think. Unfortunately, many people don't even know that they have liver disease until the disease has progressed into cirrhosis. For the most part, liver problems go unnoticed because they don't cause symptoms. Therefore, **the goal of screening on liver health with multiple tools is to be able to pinpoint problems at early stage when it's manageable or even reversible.**

How should I Prepare for my FibroScan examination

01

Empty Stomach

Don't eat anything for at least 3 hours prior to your examination.

02

Wear comfortable clothes

that will allow your examination provider to expose the right side of your rib cage.
